Operating systems, security and networks (207SE)
Lab 12: Jobs

Your task

W rite around ½ of a side of A4 comparing multiprogramming and multitasking. You should define what these approaches are, consider how they have evolved overtime and identif y their similarities and differences. You should including diagrams to support your findings.

In no more than a paragraph, describe what is an operating systems scheduler, why is it needed and what are the different approaches to measure how good the scheduler is.

The work should be referenced with appropriate sources using the CUHavard style.

Evidence

An appropriately referenced report comparison of multiprogramming and multitasking and description of what an operation system scheduler is.
